

BARIATRIC SURGERY

DR. TRINO ANDRADE

GASTRIC BYPASS

BARIATRIC SURGERY

Over the years, people suffering from excess weight and obesity have used alternatives like exercise, diet, and medicines to control their weight.

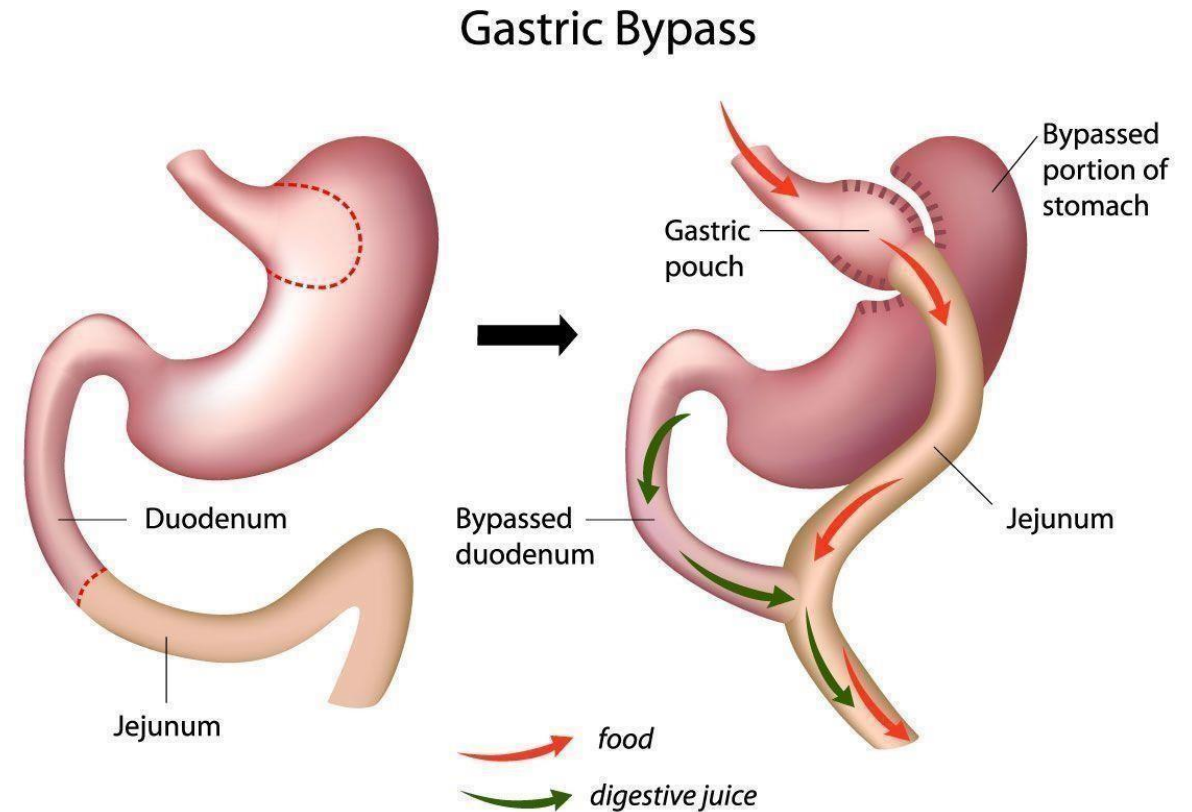

Despite their efforts, the majority of people still end up suffering from complications like hypertension, heart attacks, hormonal alterations, erectile dysfunction, diabetes, strokes, and joint damage, among other problems.

Today, BARIATRIC SURGERY is the best choice for sustainable weight loss that lets patients achieve a healthy weight.

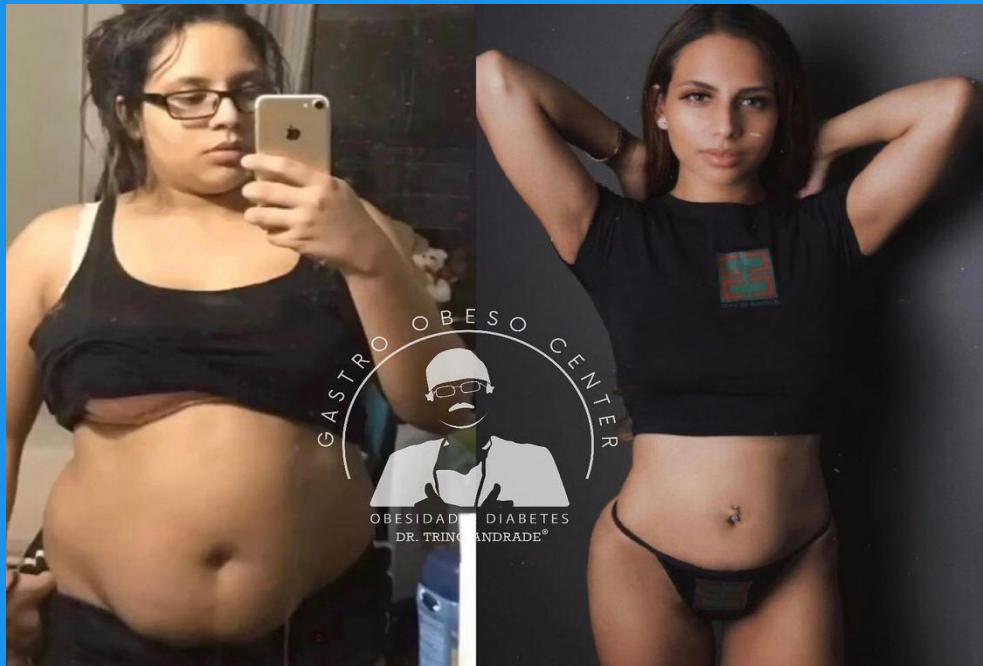

GASTRIC BYPASS

- The surgery works by regulating **Adiponectin** (the “satiety” hormone)
- The surgery is carried out **via laparoscopy** (2 cuts of .5cm and a camera of 1 cm). **For Better Cosmetic Results**
- The procedure lasts **45 minutes** and requires two nights of hospitalization.
- **Fast recovery** (about 72 hours)

After the operation, patients enjoy a better quality of life and their self-esteem improves with their physical appearance.

This is a minimally invasive surgery; we don't open up the patient which result in better cosmetic results!

INTERHOSPITAL

SU SALUD ES NUESTRO COMPROMISO

We operate out of InterHospital in the city of Guayaquil – Ecuador.

We have the most prestigious doctors, the highest quality standards and Smart Bariatric Operating Rooms

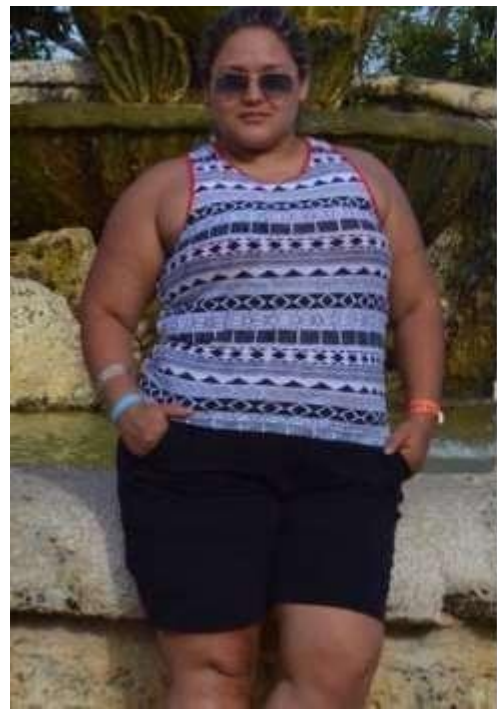

COSTS

- The cost of the surgery is \$10,000 dollars all included. The price includes clinical costs, hospitalization, medicines, medical fees, materials, etc.
